

Dispose Of Your Batteries The Right Way

CITY of CALABASAS

Is your +
showing?

Insulate the positive ends of your batteries before disposal! The collision of battery terminals can result in discharging or dangerous buildups of heat.

US Department of Transportation requires that batteries be properly insulated while being transported.

Tape the positive (+) end of each battery with tape or stickers before depositing them into collection bins.

Step 1: Use tape or insulating sticker

Step 2: Place tape on positive (+) end

Step 3: Fold tape over edges

Please ensure the safety of our roads and the continued success of our battery recycling program.

Insulate the positive (+) ends!
